

SAP MODULE PROGRAMME · BENGALURU & LIVE
ONLINE

SAP ABAP

Advanced Business Application Programming

SAP's own programming language: build the reports, forms and interfaces.

2 months around 50 hours**24x7** S/4HANA server access**Live project** end to end**Weekday or weekend** online or offline

What SAP is

SAP is the software large companies run their business on. Every purchase, sale, payment, stock movement and payroll entry is recorded in one system, so finance, stores, production and sales all read the same live numbers. S/4HANA is its current generation.

What ABAP does

ABAP is the language SAP itself is written in, and the one every customer uses to extend it. Custom reports, data uploads, printed forms, interfaces to other systems and enhancements to standard behaviour are all ABAP. In S/4HANA the language has moved on: CDS views, OData services and Fiori apps, and clean-core extension, which is exactly the work the migration wave is creating.

Why people learn SAP

Global demand

SAP professionals are hired across every major market, not only in India.

Used across every industry

Manufacturing, pharma, auto, FMCG, energy, retail, healthcare and services.

Roles that pay for the skill

SAP work sits with enterprise budgets, and employers price the skill accordingly.

A defined career ladder

End user, support consultant, implementation consultant, then lead or architect.

A day in the job

- Write an ALV report the business asked for, then handle the performance complaint
- Build a BDC or interface to load 40,000 master records without breaking anything
- Add a validation with a BADI so a user cannot save an order without a reference

Who this suits

B.Tech, BCA, MCA, B.Sc Computer Science

Developers in any language

Support engineers who want to code

Freshers who enjoy logic and debugging

Where it takes you

SAP ABAP Developer

SAP Technical Consultant

S/4HANA Developer

RICEFW Developer

Freelance SAP Developer

Why SAP, and not the alternatives

The alternatives: There is no rival product to compare. The comparison a lead will make is against general software jobs: Java, Python, full-stack web.

General development is crowded and every bootcamp feeds it. ABAP only exists inside SAP customers, so the pool of developers is small and the work is tied to enterprise budgets. Every S/4HANA migration means auditing and rewriting years of custom code, and someone has to do it.

Why people pick SAP for a career

- **Where the jobs actually are.** In India, SAP is the default ERP in manufacturing, auto, pharma, FMCG, energy and the MNC captive centres. Openings for a skill follow install base, and SAP's is the largest at the enterprise end.
- **The skill travels.** SAP runs the same way at a plant in Pune and at one in Poland. A configuration skill learned once is portable across employers and countries. Smaller ERPs lock you into a small pool of employers.
- **One system, one set of numbers.** SAP is genuinely integrated. A goods receipt posts the accounting entry itself. Rival stacks often bolt separate products together, and the consultant spends life on interfaces.
- **A migration wave is running now.** SAP has said mainstream maintenance for the older ECC generation ends in 2027, with an extended option to 2030. Thousands of companies have to move to S/4HANA before that. Migration projects need consultants in every module.

Mapped to the SAP associate certification syllabus

Every block below is a course in SAP's own learning journey for the associate exam. The code is SAP's course code, so you can check the scope against SAP's site yourself.

Basics Learning basic ABAP programming

- ABAP development tools in Eclipse, and the ABAP language basics
- Internal tables, work areas, control structures and Open SQL
- Debugging, and reading someone else's code
- Classical reports and selection screens

Deepening Deepening your ABAP programming knowledge

- Modularisation: methods, function modules, function groups
- Object-oriented ABAP: classes, interfaces, inheritance, exceptions
- ALV reporting, and performance-aware coding
- Unit testing with ABAP Unit

Data models Building data models with the ABAP Dictionary and Core Data Services

- Tables, data elements, domains, views and search helps
- CDS views, associations and annotations
- Code pushdown and AMDP
- Exposing data as OData services

RAP + clean core Clean core extensibility and the RESTful Application Programming model

- The RAP model: behaviour definitions, projections and services
- Clean core: key user, developer and side-by-side extensibility
- ABAP Cloud versus classic ABAP, and what a migration means
- Using Joule, SAP's AI assistant, to generate and explain code

Certification syllabus, continued

EXTRA Beyond the exam, because the job needs it

- Classic ABAP as it still exists at most Indian customers: BDC, LSMW, SmartForms, module pool, user exits and BADIs
- IDocs and ALE interfaces, and how to troubleshoot a failed one
- Performance work on real data volumes, which is what gets you kept on a project
- An end-to-end live project, documented, so you have something to show

The certification you are training towards

One associate certification covers ABAP. Details below come from SAP's own certification pages, checked on 11 August 2026. SAP can change them, so we confirm the current position when you register.

The new format suits how we teach. SAP assesses you in a live system now, not only on multiple-choice questions. That is exactly how you learn here: you configure it yourself, on your own S/4HANA login, every week.

C_ABAPD

SAP Certified - Backend Developer - ABAP Cloud (beta version of the practical exam)

Level Associate, developer and consultant roles

Format New format: one activity, a system-based assessment. You write and fix real code, not only answer questions.

Score 67% cut score, in English

Validity Valid 12 months, extendable by assessment

What it proves you can do

- Core principles of the ABAP language in a modern cloud context
- Build applications with the ABAP RESTful Application Programming model (RAP)
- Apply clean core principles when extending SAP S/4HANA
- Use Joule, SAP's AI assistant for developers, to generate, explain and optimise code

SAP learning journey: Acquiring Core ABAP Skills, 48 hours

How we get you there

Straight answer on scope. This exam is SAP's ABAP Cloud track: RAP, clean core and the Joule AI assistant, and SAP still lists the practical exam as a beta version. Most Indian customers also run years of classic ABAP, so we teach both: the exam scope, and the reports, forms, BDCs, IDocs and enhancements you will be handed in your first job. The exam is set, run and priced by SAP.

What makes us different

- **Trainers who are still on projects.** You are taught by people working on live SAP projects, not by full-time lecturers reading a manual. When you ask what happens at go-live, you get an answer from someone who was there last month.
- **24x7 S/4HANA server access.** Your own login on a real S/4HANA system. Practise at 6 am or at midnight, from home. Nothing is a screenshot. You do it yourself, on the real thing.
- **Doubts answered outside class.** Evenings, weekends, and between batches. You send the screenshot of the error and you get an answer, instead of waiting a week for the next class.
- **Flexible batches, online or offline.** Weekday and weekend batches, morning or evening. Learn from home or come to the centre in Hebbal, Bengaluru. Working professionals do not have to take leave.
- **A real end-to-end project.** You build the process from scratch on a live system and document it, so you have something to talk about in an interview instead of theory.
- **Certification handled properly.** We prepare you for the official SAP certification exam and help you with the booking. We are also straight with you: our completion certificate is a TGS certificate. Only SAP issues an SAP certification, and we will never blur that line.
- **Interview preparation that is specific.** Your CV rewritten the way screening software and recruiters actually read it, your LinkedIn rebuilt, and mock interviews on your own module with the questions that really get asked.
- **Job support with no fee to you.** We share profiles with employers and recruiters we talk to, and we keep working with you after the course ends. We never charge a candidate a placement fee. We also never promise a job, because nobody honestly can.
- **Help after you are hired.** New in the role and stuck on a live issue? Project support hours exist for exactly that, so your first months do not go badly.
- **Try before you commit.** A free consultation on which module fits you, and a 2-day foundation workshop before you commit to the full programme. Instalment options are available.

How the training runs

- 01 Profiling and roadmap**
We look at your background and your goal, and build the learning path around them before you pay for anything.
- 02 Core SAP concepts**
The fundamentals, explained with real business context, not definitions to memorise.
- 03 Hands-on configuration**
You configure real business scenarios yourself, step by step, on a live S/4HANA system.
- 04 Live project**
An end-to-end project that behaves like a real implementation, so you have something concrete to talk about.
- 05 Interview and placement support**
CV, LinkedIn, mock interviews on your module, and your profile put in front of employers we talk to.

What is included

- Around 50 hours of live, mentor-led training (weekday or weekend batch)
- 24x7 S/4HANA server access with your own login, so you practise from home
- End-to-end live project on real business scenarios, not slide theory
- Doubt support outside class hours, including evenings and weekends
- Configuration notes and step documents you keep after the course
- CV rewritten the way screening software and recruiters actually read it
- LinkedIn profile rewrite, step by step
- Mock interviews on your module, with the questions that actually get asked
- Guidance and booking help for the official SAP certification exam
- Online or offline (Hebbal, Bengaluru), and you can switch mode

Programmes

Programme

Foundation Workshop

2-day SAP introduction. Try before you commit.

Flagship Module Training MOST POPULAR

2 months, around 50 hours, live projects, career support.

1:1 Private Track

Private pace, fully personalised mentoring.

SAP Project Support

Already on a live SAP project? On-demand expert help, charged by the hour, with a discounted block of hours available.

Fees and instalment options are confirmed on a call, because the right programme depends on your background. Message us and we will send them the same day.

Certification

You are training towards the SAP associate certification C_ABAPD, covered earlier in this brochure. We prepare you against SAP's current syllabus and help you register. The exam is set, run and priced by SAP, and is separate from the course fee.
